

In today's information battlefield, the need for up-to-the-minute intelligence is vital in supporting the decision making of commanders on the ground. With congestion of the radio spectrum increasing, the need for reliable and capable solutions is paramount.

- Integrated system providing a common operational picture
- Multi-role / multi-platform
- Modular and scalable to host multiple assets
- Dynamic tasking and management of sensors and effectors
- Shared situational awareness and analysis

With a wealth of knowledge and expertise in the development of EW solutions including Electronic Surveillance Measures (ESM), Electronic Attack (EA) and Counter Measures (ECM), we are able to meet the demanding requirements of modern day Electro Magnetic Spectrum (EMS) management.

JOINT TACTICAL INTEGRATED ELECTRONIC WARFARE SOLUTION

The power to command
the Electro Magnetic
Spectrum is here

Clarity in a complex, congested
and contested environment

This near-real-time information can be used for spectral analysis, mission planning, tasking and management of assets for target identification, situational awareness or to mount an Electronic Attack as a mission progresses.

Tactical Integrated Electronic Warfare (IEW) For Joint Operations

Situational Awareness To Determine Adversary Intent

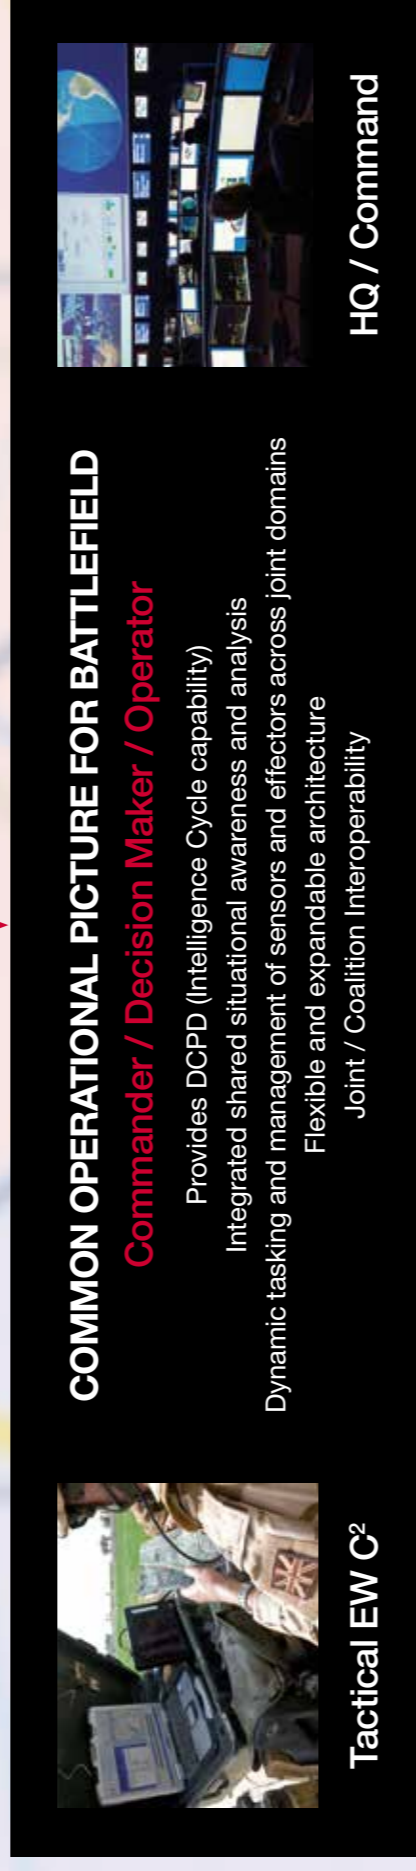

MULTI-ROLE / MULTI-PLATFORM

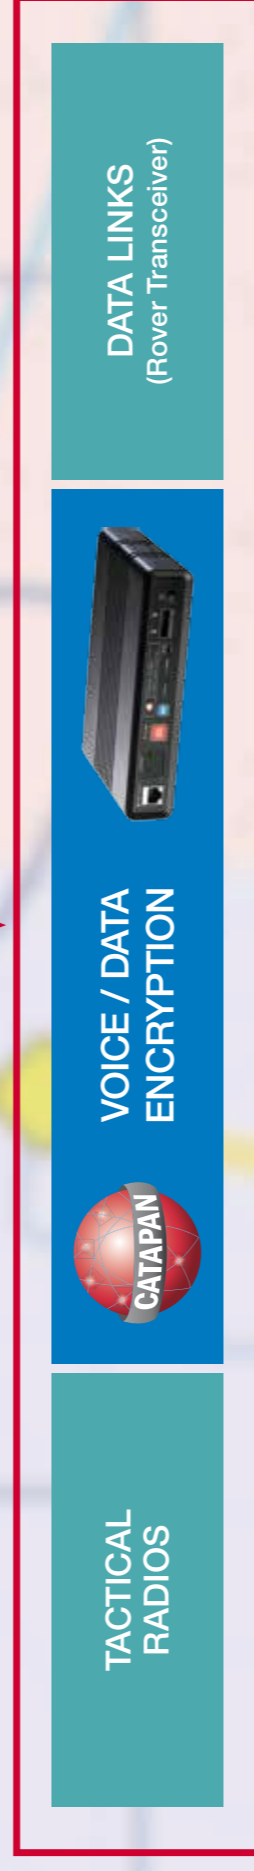

SENSORS AND EFFECTORS

NETWORKED INTEGRATED EW

SECURE COMMUNICATIONS / CYBER

Operational Scenarios

If you would like to discuss how our solutions can be deployed in different environments, please get in touch with the team.

Committed to Security

L3 TRL is an agile UK-based company which designs, develops and delivers advanced EW and Cyber solutions for the protection of people, infrastructure and assets. Our mission is to be the partner of choice for global Defence, Security and Civil organisations to create advanced electronic systems for a more secure society.

The world remains unstable, whether through natural disasters, state-on-state conflict, terrorism, transnational crime or unconventional warfare. Conflict is becoming ever more complex with the range of threats continuing to expand. That complexity, allied to the dynamic nature of the information environment, demands an adaptable and integrated approach. Whilst some nations have the requirement to protect and defend, others need to listen and prepare; there is an overarching demand to adapt and respond accordingly.

We understand the importance of tailoring solutions that are scalable and flexible to meet the specific needs and requirements of each customer, in order to provide support throughout the life of the requirement.

We provide tactical, integrated EW solutions to listen, understand and determine adversary intent, safeguarding against current and emerging threats in the most challenging environments.

L3 TRL is a provider of IEW to the UK MOD.
